Dokumentasi Project

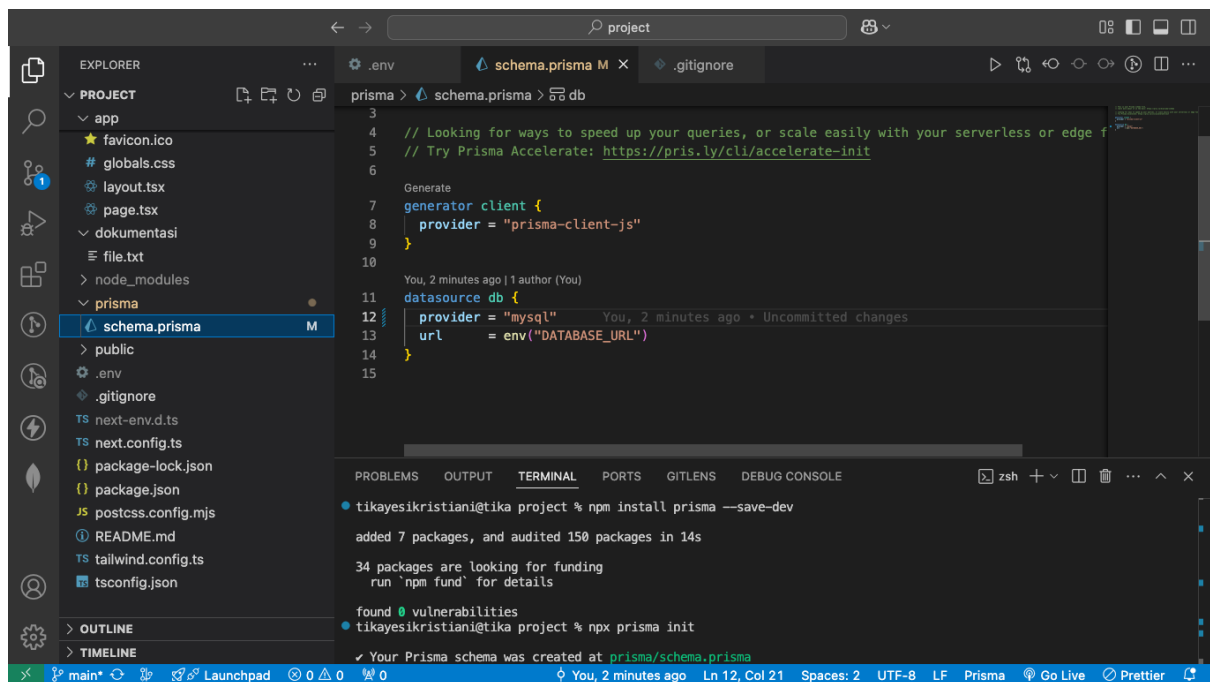

This screenshot shows the initial setup of a Prisma project in VS Code. The Explorer panel on the left shows the project structure with files like `page.tsx`, `schema.prisma`, and `.env`. The `schema.prisma` file is open in the editor, showing a basic Prisma schema configuration for a PostgreSQL database. The terminal at the bottom shows the commands used to install Prisma and initialize the schema.

```
prisma > schema.prisma > ...
3
4 // Looking for ways to speed up your queries, or scale easily with your serverless or edge f
5 // Try Prisma Accelerate: https://pris.ly/cli/accelerate-init
6
7 Generate
8 generator client {
9   provider = "prisma-client-js"
10 }
11
12 datasource db {
13   provider = "postgresql"
14   url      = env("DATABASE_URL")
15 }
```

```
tikayesikristiani@tika project % npm install prisma --save-dev
added 7 packages, and audited 150 packages in 14s
34 packages are looking for funding
run 'npm fund' for details
found 0 vulnerabilities
tikayesikristiani@tika project % npx prisma init
✓ Your Prisma schema was created at prisma/schema.prisma
```

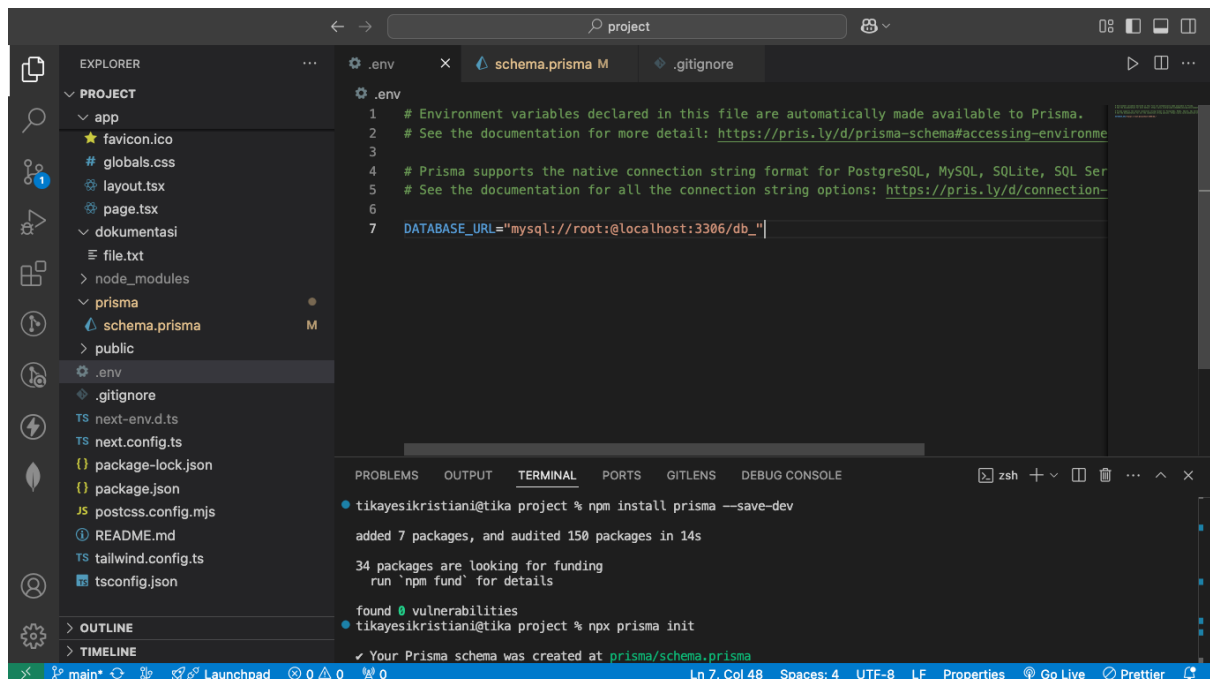

Menginstall prisma dengan cara mengetik `npm install prisma --save-dev` di terminal dan `npx prisma init` untuk membuat file `schema.prisma` dan `.env`

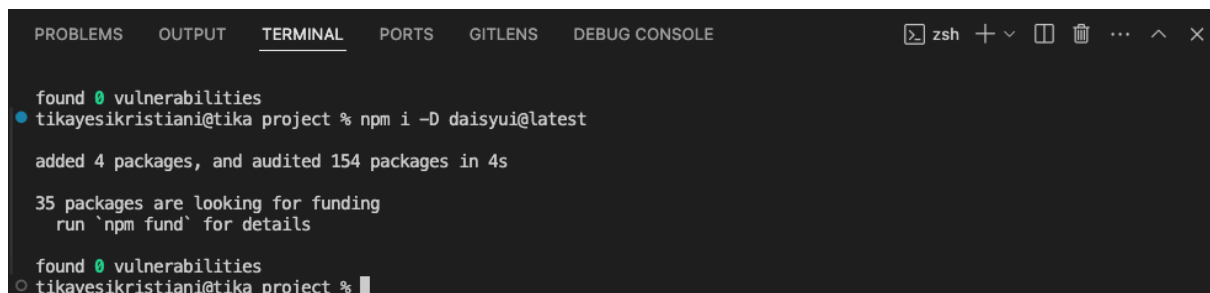

This screenshot shows the updated Prisma schema in VS Code. The `schema.prisma` file is open, and the provider has been changed from PostgreSQL to MySQL. The terminal at the bottom shows the same installation and initialization commands as the previous screenshot.

```
prisma > schema.prisma > db
3
4 // Looking for ways to speed up your queries, or scale easily with your serverless or edge f
5 // Try Prisma Accelerate: https://pris.ly/cli/accelerate-init
6
7 Generate
8 generator client {
9   provider = "prisma-client-js"
10 }
11

```

Karena Saya menggunakan mysql ganti postgresql ke mysql di file `schema.prisma` dan `.env` untuk menghubungkan ke database mysql
 Penjelasan di file `.env` root adalah usernya dan `localhost:3306` adalah portnya

Menginstall DaisyUI dengan cara mengetik `npm i -D daisyui@latest` di terminal, `@latest` maksudnya adalah versi terbaru dari daisyui

Lalu masukan `require('daisyui')`, kedalam plungins di file `tailwind.config.ts` untuk menambahkan daisyui
